The Ministry of Agriculture and SaskCanola are running the voluntary soil testing program again this year for clubroot. Early detection of clubroot is important to proactively manage the disease, keep spore levels low and minimize yield losses. These tests cost \$100 per soil sample and will be done for free thru this program.

The RM office has 10 Clubroot Monitoring soil bags that can be picked up for sampling.

The sample must be dropped off at a Ministry Regional Office, Discovery Seed Labs in Saskatoon or back at the RM Office by OCTOBER 27, 2023.
